ENGR 206: Bayesian Statistics
Mid-course survey of form and content

Please fill this out anonymously, fold, and give to me by the end of class today.

1. Please circle the answer that most closely describes the situation for you: the present pace in the class is

   too          about          too
   slow         right          fast

2. If your answer in question 1 was anything other than “about right,” how should I remedy the pace? (For example, what kinds of things should I skip or cover faster if the course is going too slowly for you, or what should I cover more slowly or spend more time reviewing if it’s too fast?)

3. Please circle the answer that most closely describes the situation for you with regard to the present mix of mathematical and statistical details in the class:

   too          math           not
   many         details        enough
   math         about          math
   details      right          details

   too          stat           not
   many         details        enough
   stat         about          stat
   details      right          details

4. If your answers in question 3 involved anything other than “about right,” how should I remedy the level of detail? (For example, what kinds of math or stat topics should I go through more, or less, thoroughly?) (Please continue on the back if needed.)

(over)
5. Please circle the answer that most closely describes the situation for you with regard to the present **mix of substantive areas of the examples and homework problems** in the class:

not enough examples/problems of direct interest to me

substantive areas of examples/problems are about right for me

6. If your answer in question 5 involved anything other than “about right,” **what topic areas would you like to see more of in the examples and problems?**

7. If the course were finishing soon, what would your **overall rating** be?

   poor    fair    OK    good    excellent

8. Please add any other comments that would help me to **better tailor the course to your needs.**
