CE1: Hands-On Computer Engineering

Research Problems 8

1. If you haven’t yet reported on a meeting or event, please do so! I’m sure you know the drill by now.

2. If you haven’t arranged to meet with your CE118 team by now, be sure you do so! The questions are in the last two homework sets, and your write-up is due next class meeting.

3. Think about someone you know that assistive technology could help. How might a new computer-based invention be able to help that person? Would it be simple or complicated to develop? What types of expertise would be needed to develop it? Do you think a company (possibly yours) one day might offer such a product?

4. Now that we are done with rogue, what do you think of the experience? What was your level of programming experience before our class exercises? Did you feel lost? Did you enjoy being able to change a user’s experience of the program? Do you think you could modify a program in the future? Do you think you could write a program from scratch?

5. Take another look at your lab notebook. I’ll be grading them in class on December 3.
