CE1: Hands-On Computer Engineering

Research Assignment 9

1. Attend the Mechatronics competition (see the flier on the class website, it is this Friday @ 6pm) and describe what the point of the contest was, what you thought of the robots, and what you would do differently if you were taking that course.

2. Write up a 1-page summary of your visit to the Bionics lab. So things you could write about are what you found most interesting about what Levi presented, what you feel the actual usefulness of the machines are verses just a human therapist, what new projects you think would be cool.

3. What was your most fun/interesting part of CE1? What was the least fun/interesting part?
