Your Name _______________________________

What station you’re sitting at ________________

What Router are you configuring (POD, router position, router name [SanJose1, SanJose2, Baypointe]? ____________________________________________

Write the content of your router’s routing table after RIP has been started on all routers before host computers are connected.

Write the content of your router’s routing table after host computers are connected.
Why are the two routing tables different?

Did your computers all successfully ping each other? Ask your TA to check off here.

When running `traceroute`, what do the IP addresses on the route represent? Be specific please.
