greedy snakes VS. greedy hipsters

(PYTHON) *Python is a type of snake in the tropics of Africa, Asia, and your computer. And Haskell is such an obscure language, that anyone who chooses to use it is a hipster.*

(HASKELL)

Proposed Project
We are implementing greedy search to compare Haskell and Python side by side. We will utilize test cases for problems that we need to solve. The point of this project is to grasp a clear definition between the speed, lines of code, and implementation styles of each language.
