TEAM JOSE GUZMAN, JOEY SYLVIA, AND GERALD BROWN

PROJECT To develop “GeoBus” – an Android application for tracking the locations of shuttle buses on campus – for Windows Phones using multiple approaches to the Universal Windows Platform (UWP).

These implementations will be compared against each other as well as the Android variant (Java + XML) for differences in ease of use and Logical Lines of Code (LLOC).

UWP approaches include:
• Visual C# and XAML
• Visual Basic and XAML
• STRETCH: JavaScript and HTML
