Google partners with VMware
Rolls out App Engine for Business
What is App Engine?

- Platform as a Service (PaaS) Product
- Supports Java & Python web apps using Google’s transparent infrastructure
- Limited API - basic RPC & Bigtable database
- Has been concern over vendor lock-in
App Engine for Business

• Bring the service up to the Enterprise level
• Formal SLA coming soon
• Support for hosted SQL databases
• Support for secure connections back to corporate intranet
VMware Partnership

• VMware has developed a suite of tools for developing cloud apps: SpringSource

• VMware’s vSphere product can provide a local “cloud” infrastructure

• Goal will be to have an open standard for supporting SpringSource apps
Same app, multiple infrastructure options
